## A C K N O W L E D G M E N T

The Department gratefully acknowledges the co-operation of Messrs. Robert P. Holdsworth and J. Harry Rich of the Forestry Department of the Massachusetts State College and Mr. A. C. Cline of the Graduate School of Forestry of Harvard University for the service rendered by them in the work of preparing for this survey.

Their experience and advice was unsparingly at the disposal of the Department and proved most helpful and useful.

# DIRECTORY OF FOREST PRODUCTS INDUSTRIES IN MASSACHUSETTS

## HAMPDEN COUNTY

The directory is being prepared as an aid to users, manufacturers, dealers, and growers of forest products in the purchase of raw material and in the finding of new markets for wood products in all stages of fabrication.

The field covered is divided into the following groups, each of which is listed separately:

1. Sawmill and Timber Operators
2. Lumber Dealers
3. Wood Fabricating Industries
4. Fuelwood Dealers
5. Miscellaneous Forest Products Industries

Each of the groups listed is a separate unit in the production and distribution of lumber and other forest products, essential for the wider distribution and most efficient marketing of forest products.

The constant introduction of new substitutes for wood in long established uses, of plywood panels, metal stampings, plastics and rock and mineral products have combined with diminishing supplies of native lumber of the perfect grades once available and considered necessary, to make the marketing of native lumber less easy. That native wood products of good quality are still available and still growing on our hillsides is sometimes overlooked by the buyer.

The collecting and presenting of statistics is not the purpose of the directory. Much fuelwood is produced and used locally or sold from farms, which does not enter into the volume figures here given. Figures for lumber production are no doubt duplicated in data shown for some sawmills, timber operators, lumber dealers and wood fabricators, and much of the volume handled by wholesale merchants is neither produced nor consumed in this State. This overlapping or lack of statistics should not lessen the practical use of the material shown. It should also be noted that the volume and employment figures are average figures, not figures for any specific year; although fluctuations in business have made it necessary to limit to recent years the period over which the average is taken. Thus plants which are operating below normal or capacity show volumes much smaller than would otherwise be given.

### Arrangement of Names in the Lists

The names of organizations and individuals are placed alphabetically by towns in each list. To preserve the grouping by towns, the village or post office address is shown in parenthesis following the name of the township.

### "Other Listings"

In each group is a column for "other listings" indicating the other groups in which an individual is listed. Each digit represents a list: 24 meaning List No. 2 and List No. 4, referring to the lists as numbered above.

## Year Established

In general the date given here is the year the business was established, at least under the present ownership. The date incorporated, if shown, is given in parenthesis under the year established. Some of the dates are approximate.

## Average Number Employed

An asterisk (\*) indicates that the same employees are also included under other listings of the company. For large plants the total average number employed is given. If a separate figure was available for those employed on woodworking only, that may be shown, and indicated in the list.

## SAWMILL AND TIMBER OPERATORS

### Notes and Explanations of Symbols in List

Sawmill operators and timber operators are included in the same list. The Sawmill Operators listed own their own mills, and may work on their own lots, on other land as timber operators, do custom sawing or operate under contract for others as indicated in the list. Sawyers not owning their own mills are not included. Mills used incidentally on farms are included. Some of these do local custom sawing or even go into more or less commercial work when the opportunity offers, others are strictly for farm use and are not available for commercial sawing, in which case it is so noted in the list. Stationary mills are indicated in the list by the symbol "S." This includes portable equipment set up and used as a stationary mill. Portable mills are indicated as "P."

A Timber Operator, as the term is used here, is one buying and cutting standing timber with or without buying the land. He is indicated on the list by "O" unless operating mills of his own.

Year Established The date given is that from which the ownership has been continuous to the present. A date in parenthesis indicates the original building of the present mill, under another ownership. Many portable mill operators have been sawyers for some years prior to the date given, which is the year they started operating their own mill.

Average Number Employed indicates number usually employed in the working of the mill when operating, and in most cases does not include woods crew, teamsters, and truckers engaged under separate contracts. Members of the family working at the mill, and in most cases the owner, are included in the figure. An asterisk (\*) indicates employees are also included under other listings.

Permanent Forest Ownership includes land held as an integral part of a farm, whether permanent holding of the farm by the present owner is contemplated or not.

Purchase of Stumpage by Scale. Apparently only a few of the operators use a scale, either for measuring standing trees or cut logs, and while some stumpage is purchased by scale, the actual payments are based on mill tally, as noted in the list.

Logs Purchased are occasionally purchased at the roadside rather than at the mill as indicated in the list.

Custom Sawing and Contract Sawing are listed together, contract sawing being indicated by an asterisk (\*) following the figures.

Additional Stumpage from Outside the State does not include timber sawed by the individual listed at a mill located outside of the State.

Average Daily Capacity. The figure given is for the mill as now run. In general the figures given are about 3M. a day for hardwoods or square edged and 6M to 10M for through and through sawing. Mills operating where farm work occupies some of the day naturally show a small figure. The higher figures are given by mills operating full days on more intensive operations.

Log Scale Used V - Vermont. D - Doyle. T - Mill Tally, used as basis of sale instead of scaling logs before sawing.

Products Manufactured by Sawmills in Hamden County

White pine goes into R.E. box-boards, lumber for farm or local use, lumber for the market and for builders' finish, and pattern stock.

Hemlock goes into dimension for local use or for the market.

Timbers are sawed from various species, usually red oak, and commonly only on order.

Boxes and shooks noted here are mostly for local needs--apple and produce boxes, etc. See list No. 3 of Wood Fabricators for other box manufacturers.

Slabs, edgings, sawdust and shavings are checked if the individual generally sells them. Sawdust and shavings are combined under one heading. Note that shavings are available only where planing equipment is indicated.

Grade Rules Some mills roughly grade their lumber into two or three grades at the mill. Standard grading is seldom followed at the mill, except for special products such as car stock and small dimension. While standard grading may be impractical for the smaller sawmill operators to follow, especially with species cut in smaller quantities, some operators counteract this by piling their lumber where dust from roads will not get into the checks, in piles that do not warp and buckle, and with adequate stickers properly placed. The sorting and separate piling of species facilitates the production

of salable small dimension stock. Proper sawing, such as turning the log to obtain the proper grain and clearest boards and dimension that a study of the log as it goes by the saw shows it will produce, (with due regard to the requirements of the market for which the timber is being sawed) produces material that is better able to compete on the market than lumber that is hurriedly and carelessly manufactured.

### Machinery and Equipment

#### Power Used:

G - Gasoline	S - Steam
(or kerosene)	D - Diesel
W - Waterpower	E - Electricity
WS-Waterpower with steam auxiliary	
WG-Waterpower with gasoline auxiliary	

Edger: Edging at the mill is done on the headsaw at most of the mills listed in this county.

Trimmer: Some of the mills use a buzz saw for trimming.

Special Saws: Shingle saws are noted. Shingles are occasionally made from pine or hemlock for local use. Other special saws such as bench saws, band saws, etc., are not noted and few of the mills listed have this equipment, other than in planing mills or associated woodworking shops for which no detailed list of equipment has been attempted.

Drying of the Lumber: The lumber in this county is sold mostly air dried; kiln-drying when desired being taken care of by the lumber dealer or fabricator in the several dry kilns operating in the county. (Some of these kilns are noted on the list of Wood Fabricators. They are for plant use, excepting those indicated by an asterisk (\*) which are available for custom work.)

Log Storage: No mills in this county use water storage for logs. Some stationary mills lay aside special logs till enough accumulate for special orders, otherwise most of the logs are sawed as they come to the mill or as they are yarded in sufficient quantities for operation.

## Lumber Dealers

This directory lists lumber dealers of all sizes, from the small local dealer in a small market area where there is little manufacturing, and dealers in rural or extensive residential areas, to those in the larger centers of manufacturing and population, and includes brokers, wholesalers and retailers. Dealers in building material (sash, doors, etc.,) that do not handle yard lumber are also included in this list.

The volume figure for lumber handled does not include wood products not measured in board feet, such as some building finish, window and door frames, finish flooring, etc., unless the material comes to the plant in lumber form and is remanufactured.

The volume figures are not limited to sales within Massachusetts. While the market area of most retailers listed is within the State, that of others does extend outside of the State. The volume of lumber handled by retail dealers that goes outside of Massachusetts may be offset by similar sales of dealers located outside of the State whose market area extends into the State. It has been found impracticable to try to limit the figures to sales within Massachusetts, even though such figures might be desirable from a statistical point of view. How much this might change the figures given for wholesalers may be seen from the fact that some of the wholesale brokers state that much more than fifty per cent of their sales are to destinations outside of the State, though still within the New England territory. However, for companies whose main offices are elsewhere or from which data is obtainable definitely separate from data for representatives or plants outside of Massachusetts, the figures are for the office or plant listed. Any exceptions are noted on the lists.

Because of the wide range of market and type of dealer included, as well as the varied type of product handled, much of which may not be measurable in board feet, and because many other items besides wood products may be handled, the figures given are not to be taken as an indication of the volume of business any company handles.

"Factory Lumber" refers to lumber sold for remanufacture.

"M" indicates that the product is manufactured by the dealer.

Silo and tank stock is often handled only on order, and may not be checked in the list.

Glued-up stock includes table and bench tops, etc., but does not include plywood, which is noted as a separate item.

Note: \* The Volume of Lumber Handled, as given for the various dealers and brokers whose territory extends outside of Massachusetts, include their whole territory, except in the instance noted above. See also note on page 11.)

## WOOD FABRICATING INDUSTRIES

This list includes the producers of products in quantity (other than lumber) in which wood is turned or shaped, or wooden parts assembled; as boxes, building finish, dowels, ladders, boats, cabinets, sash and doors. It also includes industries in which wooden pieces more or less manufactured elsewhere are used as essential parts of products composed mostly of other materials; such as brushes, brooms, firearms, tools and machine construction.

There are two other fields of lumber consumption which in the aggregate use large volumes of lumber or wood products that the present directory does not attempt to cover by detailed lists. These are: (1) Consumers, such as contractors, carpenters, upholstered furniture manufacturers (not making frames), shoe manufacturers and woodworking, cabinet and repair shops; and (2) incidental users, such as foundries, (flasks, patterns and crating), paper manufacturers and converters and other users of wooden shipping containers.

Lumber for maintenance and repair and for shipping containers is not included except that the volume of crating or box material used by many of the plants listed is included in the figure given. Where it is given the item is marked in the list with an asterisk (\*) to indicate that it is for company use rather than a product manufactured for sale.

The list has been broken up into two parts--list 3 covering items manufactured and list 3a covering the species used and the form in which it is received at the factory. The principal item manufactured or species used is underlined in some instances.

### Symbols

Products made, or species used, are checked in the list with a cross, except where a heading covers several items, all of which are not produced by the company. The headings indicate the general group in which the product made may be classified; a more specific explanation being given by notes under "principal business" and by letters used to separate item under certain headings, as follows:

Under item 3: B-boxes; C-crates; \*-for company use, not manufactured for sale. Underlined if most of the wood noted is used for packing

item 4: 1-brooms, 2-brushes

item 6: C-cabinets, R-refrigerators

item 7: B-boats

item 17: H-handles

item 19: P-parts

item 21: P-parts, N-novelties

item 22: (foundries are also included here that make patterns for custom as well as for their own use)

item 25: D-doors

item 27: S-signs

item 30: B-bobbins

item 31: S-sporting goods, P-parts, Pl & G-playground and gymnasium equipment

item 34: P-parts

## Notes on Species Used by Wood Fabricating Industries

In the following list of species used the list of Wood Fabricating Industries is repeated in the same order as given in the preceeding list, as is the figure for total annual consumption of wood.

### Form of Raw Material

Under this heading is a brief indication of the form in which wood products are received at the factory. Boards are received either round edged (RE) or square edged (SE); square-edged lumber being implied when not indicated.

The term "lumber" is used when boards and planks are used, and in some cases includes dimension material also.

"Small Dimension" refers to the usual trade term covering such pieces as heel stock and turning squares.

"Parts" include tool handles, stocks, broom handles, turnings, and any other finished or partly finished parts made of wood.

"Bolts" are short logs, usually about four feet long, which may be rough or partly worked, depending on their source and requirements of the various markets and uses.

"Plywood" may refer to any or all forms of plywood, such as fir, pine or hardwood.

"Veneer" is intended to refer to single sheet material; however, it is likely that in some instances this item also includes plywood having cabinet wood veneer on one face.

### Dry Kiln

Companies having a dry kiln are noted. These kilns are not available for custom work, except in one instance noted with an asterisk (\*). Whether a firm purchases wood green, air dry, or kiln dry is not indicated.

### Other Species

Species commonly used which are not included on the chart are noted under this heading.

N - Indicates the material used is native (cut in Massachusetts). Wood that is grown in or near this State may also be used to a certain extent in places other than those indicated.

X - In some instances the species most used is underlined.

SPECIES USED (see Page 16 for Products Made)

LIST No. 3A SPECIES USED BY FABRICATING INDUSTRIES

[illegible]

## FUELWOOD DEALERS

As a great deal of fuelwood is sold direct from the grower to the consumer, it is impossible to offer a complete list of those having fuelwood for sale. For this directory, an attempt has been made to include only those known to deal in fuelwood, that is, that can supply it to customers on reasonable demand and who make more or less of a practice of buying the wood cut or on the stump from other sources to keep up their trade if their own stumpage is not sufficient to supply the demand. To make a closer definition of a fuelwood dealer, such as limiting the list to those maintaining a yard in urban centers, would leave out many carrying on a regular though seasonal trade. As some go into the business when other means of employment fail, and may or may not continue in it, this list is probably more subject to change than any other given in the directory.

In Hampden County, separate figures have been obtained for amounts of slab wood sold. If these slabs are produced by the dealer at his own sawmill the figure is followed by an asterisk (\*), otherwise the slabs are purchased and sold. Hardwood slabs are preferred to softwood, although both are included in the figure given.

The Number Employed includes the dealer himself, while the additional help noted is in most cases only employed during the season of operation.

## MISCELLANEOUS FOREST PRODUCTS INDUSTRIES

Under this heading are listed manufacturers of and dealers in various forest products of wood not included under the previous groups, and some of the smaller products derived from the forest which are closely dependent on forest management for continued production.

### CHARCOAL

Brooks, Merrill D., Granville

Manufactures charcoal from slabs in varying quantities. Sold wholesale. Established 1918.

Carew, Nelson M., Hampden

Manufactures about 1500 bu. from mixed hardwoods. Sold wholesale. Established 1885. Also listed as timber operator, lumber and fuelwood dealer.

Springfield Facing Company, 1695 Main St., Springfield.

Dealer in foundry supplies and charcoal products. Produces powdered charcoal from an average of 455 tons of charcoal a year from outside of the State. Established 1886.

Potter, W. N., Grain Stores, Inc., 79 Page Blvd., Springfield. Wholesale jobber in graded charcoal from the South, for animal feed, golf courses, etc.

Puffer, H. C., Co., 194 Lyman Street, Springfield

Wholesale jobber in graded charcoal from the South, for feed, etc.

### GREENS

Christmas trees and florists supplies are included under this heading. Christmas trees, spruce boughs and ferns are not harvested in this county to an important commercial extent as in Berkshire and Franklin Counties.

S. E. & R. W. Granger, Huntington

Collect Lycopodium, laurel, hemlock boughs, spruce boughs, ferns, for the wholesale market. Established 1937.

Springfield Florists Supply, 22 Franklin St., Springfield

Wholesale dealers in florists supplies, handle native laurel and hemlock, ferns (88M), Lycopodium, besides huckleberry, black alder, balsam, bayberry, and spruce cones; the latter group coming mostly from outside of the State.

### EXCELSIOR

No excelsior is manufactured in the county. For packing purposes it is being replaced to a certain extent by paper excelsior and other forms of padding.

Massasoit Trading Co., 71 Sharon St., Springfield

Wholesale jobber of excelsior and upholsterers' supplies, handles excelsior in carload lots.

## POSTS, POLES, PILING

Posts are carried in stock by some lumber dealers (See list 2), otherwise these three products are generally produced or handled on order.

Peck Lumber Co., Westfield

Lumber producer and wholesaler, also handles posts, poles, piling and sawdust, wholesale. Established 1908

Chestnut poles (12 foot) are used in tobacco fields.

The Consolidated Cigar Corp., H. H. Stickles, Division Manager, Chicopee Falls, uses about 3000 a year for replacements and for covering new fields. Other tobacco producers use varying amounts.

## SAWDUST

Most of the sawdust and shavings produced in the county are sold directly from the producer to the consumer. The saw-mills sell sawdust unless located on portable sets from which it is difficult to remove the sawdust, and the larger planing mills sell it where it is not used in the plant.

M. J. Walsh & Sons, Holyoke

Dealer in hardwood and softwood sawdust and shavings, including that produced at their own plant.

GROUND WOOD is not produced in the county at present.

## WOOD DISTILLATES

Some witch hazel brush is shipped out of the western part of the county for distillation.

## MAPLE SYRUP PRODUCTS

Maple Syrup production in this county is mainly in the western hill towns. Flavor manufacturing from maple syrup requires a higher grade product of more uniform quality than is obtainable from the many small orchards in this section.

WOOD PULP is not manufactured in this county. This is, however, an important center for the manufacture and converting of paper products. As these mills are outside of the scope of this directory, no list of them is included. (See note on "incidental users" under Wood Fabricators.)
